cativity, and can be used in AMM81210 to AAM91921. (1) have cytostatic activity, and can be used in gene therapy and vaccine production. (1) proteins and polymucleotides may be used in the prevention diagnosis and treatment of diseases associated with inappropriate (1) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (1) by expression in a patient's genome cupplement the patients own production of (1). Additionally, (1) polymucleotides may be used to produce the secreted (1), by inserting polymucleotides may be used to produce the secreted (1), by inserting protein. (1) proteins and polymucleotides may be used to produce the secreted (1), by inserting protein. (1) proteins and polymucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic antigen genomic to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK49421 to AAK84960 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           3948 TTTTTTTTAGTTGAGACGGGGTTTCACCATGTTGGCCAGGCTGGTCTTGAATGCCTGAT 3889

                                                                                                                                                                                                                                                                                                                                           01-SEP-2000
                                                                                                                                                                                                                                                                                                                                                                                             05-SEP-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          38-SEP-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          14-SEP-2000
    AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient segment contracts of the affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK84950 and AAM82169 represent invention.
                                                                                                                                                                                                                                                                                                                             1136 ATATATAGTATTTGTGGTAGAGATGGGATTTTGCCATGTTGCCCAGGCTAGTATTGAACT 1195

supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invontion. AAK5492 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TCCTGACCCAAGTGATCTCCCTGCCTCTCCCAAAGTGCTGGGATTACAGGTGTGAA

the BAC end region in potato genomic DNA. The BAC sequences are used to inhe back end region in potato genomic DNA. The BAC sequences are used to identify the potato Rx gene. The Rx gene (AAZ37153) is a resistance gene which confers extreme resistance against potato virus X (PVX).

Sequence AAZ37154 is the Rx coding sequence free from introns. The Rx cesistance polypeptide AAY52152, this vector which encodes the Rx resistance polypeptide AAX5125. This vector can be used to transform plant cells to produce a transgenic plant with resistance to PVX. The Rx gene can be used to engineer resistance traits, preferably broad spectrum carrame resistance, into plants. The Rx gene can also be activated by non-PVX viruses, e.g. Narcissus mosaic virus (NMV), Nandina virus X (NVX), viola mosaic virus (WMV), Cymbidium mosaic virus (WAMV), Poplar mosaic virus (POpMV) and White clover mosaic virus (WCIMV). Rx can be used to offer specific protection against this group. The Rx gene can be used to create antibodies specific for Rx. The antibodies can be used to create antibodies specific for the detection, identification or isolation of Rx or homologues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Resistance gene; Gpa2; potato; phytopathogenic nematode; chromosome 12p; marker; IPM4c; 111R; Potato Cyst Nematode; PCN; Globodera; nematicide; nucleotide binding site; NBS; nematode resistance; detection; diagnosis; PCR primer; BAC clone; potato DNA insert; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Potato, Rx gene, resistance gene, potato virus X; PVX; transgenic plant, broad spectrum extreme resistance; Narcissus mosaic virus; NWY; NVX; NWV; Nandina virus X; Viola mosaic virus; Cymbiddium mosaic virus; CyWV; PopMV; Poplar mosaic virus; White clover mosaic virus; WClMV; PCR primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is that of the fusion region between a mouse ROR2 gene (see also AAH26803) and the polylinker region of Bluescript plasmid, which is flanked by a beta-aglactosidase Lac2) coding region. Disruption of the endogenous murine ROR2 allele by insertion into Bluescript resulted in a sequence concoding a novel product (see AAB82917) in which the ecto- and transmembrane domains of ROR2 were fused to Lac2, which replaced to mormal tyrosine Kinase-like cytodomain. This provided for simultaneous knocking out of ROR2 function and the capability of Lac2 staining to follow ROR2 expression patterns. Mice heterozygous for the mutant allele (ROR2+/-) were viable, fertile and appeared normal. ROR2 was selectively expressed in the chondrocytes of the ceveloping anlagen of all bones formed by endochonical ossification. Mice homozygous for the ROR2 mutant allele (ROR2-/-) exhibited perinatal lethality, with shortened snout, limbs and tail as well cas cleft palate. Thus, disruption of the mutine ROR2 gene leads to profound skeletal abnormalities. As ROR2 appears to play a critical role in cartilage formation it may be useful in developing strategies to treat diseases of cartilage such as solved the real planks of the mutant all the real place of the mutant all the real
                                                                                                                                                                                                                                                                                                                                                                      Increasing chondrocyte growth, development and activity, for increasing cartilage formation, comprises contacting chondrocytes expressing orphan receptor ROR2 with an agent capable of activating ROR2 receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Methods of increasing, or preventing, chondrocyte growth and cartilage formation using agents that activate or block the ROR2 receptor are claimed, as well as methods of identifying agents capable of activating, or blocking the activation, of the ROR2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present DNA sequence is the PCR primer AB3, used to amplify the right end sequence of the potato DNA insert in the BAC clone. The recircularised BAC clone with the potato DNA insert is used as the template for the amplification. This primer is used to screen Cara BAC inbrary with markers IPM3, IPM4 and IPM5 and to isolate BAC clones from the RA1/Gpa2 locus. The Gpa2 gene confers resistance to infections by phytopathogenic nematode of the Globodera genus. It is mapped to short arm of chromosome 12 (12p), between the markers IPM4c and 11R. This arm of chromosome 12 (12p), between the parkers IPM4c and 11R. This coup is associated with resistance to Potato Cyst Nematodes (PCN) like G. pallida and G. rostochiensis, that invade and damage the roots of Solanaceae. It has nematocidal activity. A recombinant DNA sequence Comprising the Gpa2 gene sequence can be transformed or transfected into plants, to provide increased resistance to nematodes. The polypeptides of comprising the used in nematicide compositions and for detection and

The present sequence is the PCR primer AB3, used to amplify the right end sequence of the potato DNA insert in the BAC clone. The recircularised BAC clone with potato DNA insert is used as template for the amplification. This primer is used to screen Cara BAC library with markers IPM3, IPM4 and IPM5 and to isolate BAC clones from the RA1/Gpa2 locus. Gpa2 gene confers resistance to infection by phytopathogenic nematode of the Globodera genus. It is mapped to short or chromosome 12 (12p), between the markers IPM4c and 111R. This arm of chromosome 12 (12p), between the markers IPM4c and 111R. This local or chromosome is associated with resistance to Potatoc Cyst Nematodes (PCN) like G. pallida and G. rostochiensis, that invade and damage the roots of Solanaceae. It has nematocidal activity. Recombinant DNA sequence compassing gene can used to produce transgenic plants with increased resistance to nematodes. The polypeptides can also be used in nematicide compositions and for detection and diagnosis of nematode
Recombinant Gpa2 polynucleotide from potato, Solanum tuberosum, useful to confer resistance to phytopathic nematodes of the genus Globodera in transgenic plants, e.g. resistance to potato cyst nematodes in potatoes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    rapamycin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Rapamycin; neomycin resistance; antifungal; anticancer; neurotrophin; immunosuppressant; polyketide synthase; cytostatic; neurotrophic; antitumour; PCR primer; ss.

present invention describes a recombinant Streptomyces hygroscopicus
       (A) that produces rapamyoin compounds (1). Also described are: expressee a hybrid PKS (polyketide synthase) comprising at least part of each of rapamyoin PKS and heterologous PKS; (3) recombinant S. hygroscopicus that does not express at least one rapamyoin modifying enzyme but does produce a rapamyoin analogue; and (4) recombinant S. hygroscopicus that expresses a PKS consisting of only part of a rapamyoin PKS. (A) has cytostatic, antifungal, immunosuppressant and neurotrophic activities. (I) are useful as antitumour, antifungal or immunosuppressant agents and neurotrophics, and also as intermediates for other active compounds. Modular construction of PKS makes possible production of a large number of hybrids for screening. The present sequence represents a PCR primer which is used in an example from the
                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                   .

New proline-rich, extensin-like receptor kinase nucleic acids and polypeptides useful for increasing plant wounding or pathogen resistance, or for producing transgenic plants with increased wounding

Examples; Page 45; 91pp; English.

or pathogen resistance

The present invention relates to proline-rich extensin-like receptor kinase (PERK). The PERK nucleic acids and polypeptides are useful for increasing the resistance of plants to wounding and pathogens. These are also useful for producing transgenic plants with increased wounding and pathogen resistance compared with a wild type plant, as well as in assays for identifying and developing compounds to inhibit and/or enhance polypeptide

function directly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           arabinose promoter and arac gene. The resulting product is used in method of producing recombinant human chitinase in bacterial cells. Chitinases are useful for treating or preventing fungal infection and as immunogens for generating antibodies which are used to purify, detect and quantify chitinases, e.g. for diagnosis of Gaucher's disease. The nucleic acid sequence of the chitinase is also useful as a probe to identify and isolate genomic DNA encoding chitinases or similar proteins, or cells expressing them or to generate transgenic ('knockout') rodents. It can also be used in hybridisation assays and to detect genetic alterations in the chitinase gene related to disease. Agents that inhibit this protein may be useful in treatment of Gaucher's disease and inhibit this protein may be useful in treatment of Gaucher's disease and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 rheumatoid arthritis, where overexpression of the protein can damage the extracellular matrix. Chitinase also improves the activity of other antifungal agents and may allow a reduction in the dose of such agents,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAV10441-V10443 are primers used to amplify the Salmonella typhimurium

The present sequence is the polylinker region of plasmid araBC contains the araC gene promoter, which was isolated from the arabinose operon BAD of Salmonella typhimurium. It was used to express human A-kinase anchor protein 79 (ARAP 79). By binding both cAMB-dependent protein kinase (PKA) and calcineurin, AKAP 79 co-localises a kinase and a protein kinase (PKA) and calcineurin, AKAP 79 co-localises a kinase and a phosphatase that may regulate flux through a specific signalling pathway. Calcineurin is a Ca2+/calmodulin-dependent protein phosphatase which is involved in many intracellular signalling pathways. It participates in regulation of IL-2 expression following T cell stimulation in T cells. Calcineurin-binding peptides derived from AKAP 79 may be used to inhibit calcineurin-binding peptides derived from AKAP 79 may be used to inhibit calcineurin activity in a cell. The peptides are useful for treating T cell-mediated disorders. Calcineurin deletion mutants which bind AKAP 79 are useful for defining an AKAP 79 binding site, for stimulating expansion, or for enhancing T cell responses to experimental stimule for evaluation of early events in T cell biology and activation of the immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel calcineurin deletion mutant having calcineurin polypeptide sequence and binding A-kinase anchor proteins, for treating graft rejection following organ transplantation and T cell-mediated disorders

The invention relates to chitinase derived polypeptide, chitin-binding fragments of human chitinase, fragment analogues, purified and isolated polymuclectides encoding such fragments. The invention is used for treating fungal infections and for detecting and binding chitin. The present sequence is a araCB polylinker DNA used in the exemplification
                                                                                                                                                                                                                                                                                                                                   chitinase derived polypeptides used for treating fungal infections for detecting and binding chitin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Vaccine, delivery, hyperblebbing strain; Neisseria gonorrheae, bleb; blebosome, antigen, diagnosis, immunisation; immunostimulant, viral disease; rabies; hepatitis; bacterial disease; salmonella; pneumonia; fungal disease; parasitic disease; infection; ss.
                                                                                                                                                                                                                                                                                                             The present sequence is that of an araCB polylinker flanked by a 5. XbaI site and a 3. HindIII site. The polylinker was used in the construction of expression plasmid paraMo218, in which human chitinase cDNA (see ABL57380) was under the control of the Salmonella arabinose promoter. The plasmid was used to transform Escherichia coli cells for recombinant production of a chitinase analogue (see ABB76294). The invention provides human chitinase polynucleotides and polypeptides, and methods for the recombinant production of human chitinase products, for use in treating fungal infections. Human chitinase can be used to improve the activity of a non-chitinase antifungal agent in the treatment of candidiasis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  aspergillosis, coccidioidomycosis, blastomycosis, paracoccidioidomycosis, histoplasmosis, cryptococcosis, cryptococcosis, chromoblastomycosis, sporotrichosis, mucormycosis, dermatophytoses
                                                                                                                                                                               Co-administering chitinase to improve the effectiveness of fungici drugs e.g. amphotericin B or itraconazole, useful for treating fun infections e.g. candidiasis, coccidioidomycosis and blastomycosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .

The present invention describes a vaccine for providing immunity against a disease. The vaccine comprises blebosomes where an immunogenic polypeptide specific for the disease is present in a pharmacologically effective dose in a pharmaceutically acceptable excipient. The vaccine is useful in the form of a pharmaceutical composition for treating a disease, comprising a blebosome where the polypeptide (especially a cytokine, a receptor and/or an antibiotic) is active against the disease. Immunisation against diseases and are useful in diagnostic assays where the presence of antibodies against disease can be detected in samples from a patient suspected of having the disease can be detected in samples viral diseases such as rabhes or hepatitis, bacterial diseases such as almonella or pneumonia, fungal diseases and parasitic diseases. The blebosomes are also useful in a delivery system for other biological molecules, e.g. chemotherapeutic agents for use in chemotherapy or immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antigens are present in the absence of other cellular components. In addition the antigens are assembled in a natural biological membrane allowing the antigen to form a native conformation more closely minicking what is encountered in the natural organism. The present sequence represents an oligonucleotide used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                enhancers/suppressors. Vaccines using blebosomes collected from hyperblebbing strains have an advantage over conventional vaccines as the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          super-antigen or defiv. - useful for preventing and treating
antigen-mediated and antigen-initiated diseases, such as toxic shock
syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Toxic shock syndrome; toxin; TSST-1; Staphylococcus aureus; superantigen; mutant; derivative; deletion; substitution; vaccine; treatment; prophylactive; antibody response; T-cell; thymocyte; MHC; major histocompatibility complex; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Primer for amplyfying S. aureus toxic shock syndrome toxin gene.

improve——, call activation, when it is a B cell, or prolong the life of tissue cells in a host having a T cell that specifically recognises and mediates an immune response directed against the tissue, when it is a killer cell. Specifically, this is useful for preventing transplant (xenograft or allograft) rejection and treating autoimmune disease, e.g. systemic lupus erythematosus, myasthenia gravis, rheumatoid arthritis and insulin dependent diabetes mellitus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Polynucleotide amplification using bivalent PCR primer to generate rolling circle intermediate or linear concatemers - requires reduced amt. of primer compared to conventional PCR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is a component oligonucleotide of the 2.71 kb plasmid plBSfil (Stemmer [1994) Nature 370:389), which encodes the gene and promoter region for R-TEM1 beta-lactamase. A collection of 134 component oligonucleotides, including the present sequence, were synthesised and used to assemble the plasmid by end complementary polymerase reaction (ECPR), employing the overlapping ends of the oilgonucleotides.
                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                                                                                                     nseq
                                                                                modified or mutated so that it no longer has the pathological effect of a superantigen but is still capable of eliciting an antibody response which cross reacts with and protects against the native superantigen. The TSGT-1 superantigen derivative modifies T-cell receptors or class II major histocompatibility complex (MHC) binding. The superantigen derivative is preferably a deletion or substitution mutation of a portion of the superantigen. The details are a vaccine for preventing and treating antigen-mediated and antigen-initiated diseases. Two primers (AAT27723, AAT27724) were us in the amplification, subcloning and mutagenesis of the toxic shock

```
The present sequence represents an M13mp18 single stranded DNA probe which was used in a new method for detecting double stranded DNA having a specific DNA nucleotide sequence. The method comprises: (a) mixing the single stranded probe, labelled at the 5' end and with specific nucleotide sequences at its 3' and 5' ends, with the RecA protein molecule; (b) adding a DNA sample containing the double stranded DNA sequence, which is complementary to the specific nucleotide sequences; (c) adding ligase, allowing the nucleotide sequence of the double stranded DNA to overlap with the specific nucleotide sequence at the ends contain and (d) removing the RecA protein molecule, and detecting the resulting hybrid DNA using the label. The method uses to a single stranded DNA probe to detect a double stranded DNA having a specific stranded DNA probe to detect a double stranded DNA having a specific damed of the sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Probe; detection; RecA protein; ligase; circular DNA probe; label;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Using single stranded DNA probe to detect double stranded DNA sequence - having specific nucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            damage, allowing accurate sequence information to be obtained
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DB 18; Length 40;

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
